

HTTP Requests and Responses

Question 1

What was the response when you sent a GET request to /pet/1?

The server returned a 404 Not Found error with the message "Pet not found".

Question 2

What was the response code, and what does it mean?

Response code: 404 Not Found

This means the server could not find a pet with the ID that was requested.

Question 3

What fields were in the response body, and what do they mean?

The response body contains:

```
{  
  "code": 1,  
  "type": "error",  
  "message": "Pet not found"  
}
```

Field	Meaning
code	An internal error code returned by the API
type	The type of response(error)
Message	Explains the error("Pet not found")

Question 4

When you send a POST request to /pet, what did you put in the request body?

I changed the example request body by setting:

name: "Buddy"

status: "pending"

Question 5

What was the response to the POST request?

The server returned the new pet object in JSON format. It included:

- a generated id
- a name "Buddy"
- the status "pending"
- the other pet information that was sent in the request.

Question 6

What was the response code of the POST request, and what does it mean?

Response code: 200 OK

This means the request was successful, and the server accepted the new pet information.

Question 7

Can you explain the purpose of the /pet/{petId} and /pet endpoints?

- GET /pet{petId} retrieves information about a specific pet using its ID.
- POST /pet adds a new pet to the Petstore.

Question 8

If the /pet/{petId} endpoint returned a 404 status code, what would that mean and what might cause it?

A 404 Not Found means the server could not find the requested pet. This usually happens because the pet ID does not exist.

Question9

Choose one more endpoint from the Petstore API and explain its purpose and how you would use it.

The GET /pet/findByStatus endpoint is used to find pets by their status, such as available, pending, or sold. I would use it to search for all pets that are currently available for adoption or to view pets with a specific status.
