Practical Skills Module 3: Topic 5

Topic Code	PM-03-PS05
Topic	Use import, input and output functionalities

Scope of Practical Skill

Given a range the learner must be able to:

- PA0501 Import modules and use them in the program
- PA0502 Use I/O functions.
- PA0503 Accept user input

Applied Knowledge

- AK0501 Concept, definition and functions of Python programming functionalities

Internal Assessment Criteria

- IAC0501 Expected results with Python import, input and output are achieved

Resources:

Knowledge	Information from Python Programmer Curriculum
National Curriculum Framework	900221-000-00-PM-03

Practical task

Follow the facilitator's instructions to complete the following activities:

Scenario: Python-Based Quiz Game

A quiz application is required to test users with a series of questions, track their scores, and provide immediate feedback. The program should also record results and allow the user to exit the quiz at any point.

Step 1: Create and Name Your Python File

Create a file called **quiz_game.py** in your designated task folder.

Step 2: Import Required Modules

Import the following modules to enhance functionality:

- `random`: To randomise the order of questions.
- `time`: To track how long the quiz takes and introduce pauses for user experience.
- `sys`: To allow the program to exit gracefully if required.

Step 3: Display Quiz Instructions and Questions

Use `print()` statements to present the quiz instructions and questions clearly to the user.

Step 4: Collect and Process User Responses

Use the `input()` function to collect the user's answers. Process each response to determine if it is correct.

Step 5: Track Scores and Provide Feedback

Keep a running total of the user's score. Immediately inform the user whether their answer was correct or incorrect after each question.

Step 6: Apply Timing and Execution Delays

Use `time.sleep()` to introduce short pauses between questions. Also, measure how long the user takes to complete the quiz from start to finish.

Step 7: Save Quiz Results to a File

Record the user's name, score, and time taken in an external text file for future reference (e.g., `quiz_results.txt`).

Step 8: Implement Exit Functionality

Use `sys.exit()` to allow the user to exit the quiz at any point by typing a specific command such as `'exit'`.

Take note

Important: Be sure to upload all files required for the task submission inside your task folder and then click "Request review" on your dashboard.
